Curation Costs Exchange: Responses

- Trusted place to exchange cost information seems a valuable initiative.
- Success clearly depends on reaching critical mass.
- Useful to have breakdowns against various cost categories and to compare different types of institution.
- Responses/connections from three perspectives:
 - Dryad: granularity, can we compare like with like?
 - RDA Group on Cost Recovery: from costs to cost recovery and business models?
 - CODATA: internationalisation?

Dryad Sustainability

- Exploring a depositor pays business model:
<http://datadryad.org/pages/pricing>
- Started charging on 2 Sept 2013.
- Relying on low cost, low curation, high throughput business model.
- Charges range from 50USD to 90USD per data package.
- Emphasises researcher responsibility to ensure quality of data and metadata.
- **Will there be sufficient granularity in CCEX to accommodate Dryad model?**

Background: RDA Cost Recovery Group

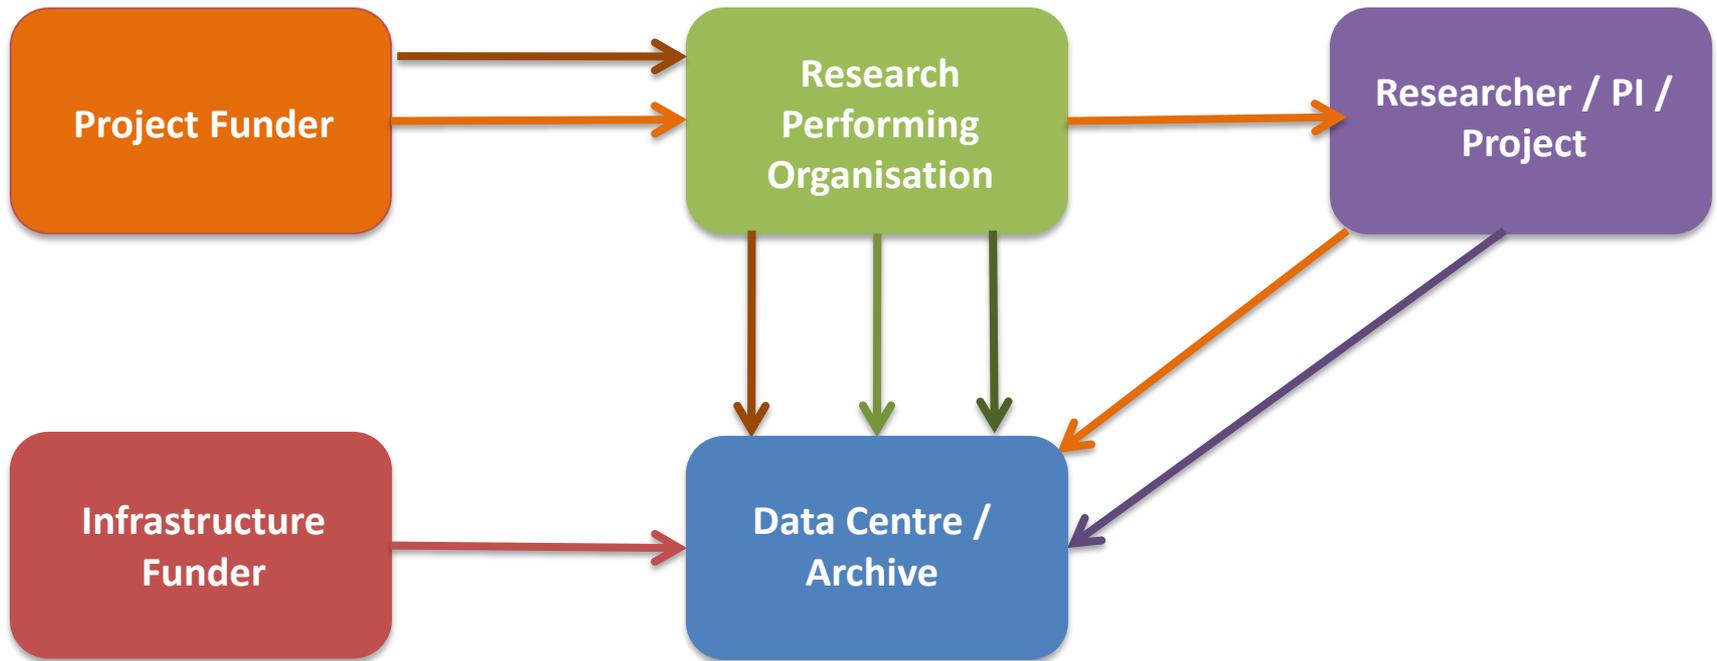

- Basic 'structural' funding of data infrastructure may not keep pace with increasing costs
- Need to consider alternative cost recovery options and a diversification of revenue streams
- Not just who will pay for public access to research data, but how these payments will be made

Cost Recovery and Business Models: Objectives and Deliverables

- **A contribution to strategic thinking** on cost recovery by conducting research to understand current and possible cost recovery strategies for data centres
- **Report providing insights into the** various cost recovery models available to data centres and the appropriateness to different situations.
- What **business models** exist and are available for the data centres that provide public access and what options are open for data centres to diversify their income?
- What approaches to funding are available that may help ensure sustainability of data centres?

Work Packages

- **Work Package 1:** summary of current work on cost models (including recent work conducted by the 4C and APARSEN projects and by ICPSR);
- **Work Package 2:** summary of funding policies specifically relating to how the costs of data availability/publication may be recovered;
- **Work Package 3:** survey by means of short structured interviews and focus groups, of various existing approaches to cost recovery and available/possible business models;
- **Work Package 4:** detailed case studies of the cost recovery strategies of a limited set of data centres.
- **Work Package 5:** report and conclusions, *White Paper on Cost Recovery Options for Data Centres*

1. **Structural (central contract)**
2. **Hosting Support (indirect or direct support through institutional hosting)**
3. **Annual Contract (from depositing institution)**
4. **Data Deposit Fee**
5. **Access Charge**
6. **R&D Projects**

International Workshop on Open Data for Science and Sustainability in Developing Countries

- Developed a set of *Principles of Preservation of and Open Access to Research Data in Developing Countries* and *Guidelines* for their implementation.
- Strong endorsement for the workshop from Kenyan Cabinet Secretary and from local universities and research institutes.
- Cabinet Secretary Dr. Fred Matiang'i: announced data centre to be established at JKUAT in order to accelerate analysis, management and archiving of data.
- **How can the CCEX be adapted to developing countries? Can CODATA help internationalise it?**

Thank you!
